PROFESSIONAL SUMMARY

Focused Backend Engineer with DevOps experience with 2+ years and 5 years of Business Operations Management. Specialized in architecting cost-efficient, self-hosted production systems using Linux, Docker, and RabbitMQ. Experience working across the full **Product Life Cycle** of high-throughput systems, notably reducing production latency from ~700ms to <50ms.

I have experience in improving **efficiency** through automation and resilience patterns in hybrid environments. I am continuously improving and learning about industry trends.

CORE SKILLS

DevOps & Infrastructure: Docker · Kubernetes · Linux · Bash scripting · GitHub Actions · RabbitMQ · MinIO (S3) · Caddy · MediaMTX · VMware vSphere · Windows Server

Cloud computing & Platform: AWS (CloudFront, S3, EC2, VPC) · Azure Fundamentals · GCP

Backend & Automation: C#/.NET APIs · Python/FastAPI · Event-Driven Architecture · Go (Golang) services · Asterisk Manager Interface (AMI) · SQL Server · SQL queries optimization · coding standards

Frontend: Kotlin android, Angular.

Observability: Sentry · Grafana

Soft Skills: Problem Solving & Root Cause Analysis · Cross-Functional Collaboration · Strategic Cost Optimization · Adaptability · Attention to Detail · Supportive · Continuous Improvement · mentorship · communication · Kanban · agile

EXPERIENCE

Memorial Amor Eterno, Honduras- *Infrastructure\Software Engineer*

April 2024 – Present

- **Platform Architecture:** Architected a cost-efficient, self-hosted infrastructure (MinIO, Kubernetes, Docker, GitHub Runners) to deliver cloud-native capabilities without recurring cloud vendor costs.

Introduced version control system, Continuous Integration and continuous delivery CI/CD. Linux Systems.

- **Distributed Systems:** Engineered the "Digital Receipts" system, decoupling legacy ERPs from external providers using RabbitMQ. Implemented resilience patterns including exponential backoff, and idempotent processing.
- **Software Development:** Developed software through the entire Software Development Lifecycle for improving operational efficiency and ensuring reliability.

Recently I built in 3 weeks an Interactive Memorial Wall & Lead Capture module, that will cut down \$3,000 in licenses the next year.

I am developing an android application that uses outbox pattern, delta sync, and offline first.

- **Performance Engineering:** Developed high-performance C# APIs (<25ms latency) using caching.

Reduced P99 latency by 90% through database optimization techniques such as query monitoring and index optimization.

- **Security & Networking:** Implemented Caddy reverse proxy with automated TLS, secure routing, and environment isolation.
- **Specialized Systems:** Built a streaming infrastructure tested for 4,000+ concurrent viewers and a **Go-based** background service for PBX monitoring via Asterisk (AMI).
- **Monitoring:** Introduced Sentry for full-stack error tracking, Prometheus and Grafana.
- **AI:** Integrated AI in my workflow to improve speed, but under my strict review.

Grupo Platino, Honduras

- *Data Analyst Developer*

October 2023 – April 2024

- **API Stability:** Debugged and refactored critical C# APIs, resulting in a significant reduction in production error rates and improved data accuracy.
- **Requirements Engineering:** Collaborated with stakeholders to define technical specifications for internal ticketing and approval workflows.

- *Developer Intern*

July 2023 – October 2023

- **Containerization:** Developed and Dockerized a Django API for construction cost-control reporting.

-
- **Digitization:** Prototyped internal workflow solutions using AppSheet to replace legacy manual processes.

La Fronteriza, Honduras- *Operations Manager*

Oct 2017– June 2022

- **Strategic Business Growth:** Pivoted the business model from bulk commodities to high-margin "micro-inventory" (accessories and specialized tools) to maximize net profits and cash flow.
- **Competitive Advantage:** Developed a "moat" by sourcing hard-to-find inventory that larger competitors lacked, while building a reputation for high reliability and customer loyalty.
- **Business Lifecycle:** Managed nearly 5 years of full-cycle operations, including a successful transition and wind-down to pursue higher education and address family needs.
